

Fathom

Dynamic Statistics Software!

(Grades 8-College)

Fathom Dynamic Statistics software is the premier tool for dynamic, data-driven investigations in mathematics, science and statistics. Unlike standard statistics packages, *Fathom* is specifically designed for learning as well as doing mathematics on data analysis and statistics, making it an ideal educational tool. With *Fathom's* dynamic tools, your students will:

- Use real-life data sets to make challenging topics - like families of functions - relevant and engaging
- Drag data points to see their influence on mean and median, or linear regression lines
- Use algebra to create their own graphic representations of data
- Building sampling distributions of any statistic, and plot or calculate their own statistics

Creating a graph or analysis is just the beginning. Dynamic features and tools encourage students to chart their own course, ask questions, and explore. Students take control of the learning process and ownership of their work.

The hundreds of real-world data files that come with *Fathom*, the easy drag-and-drop interface to data on the Internet, and the classroom-ready activities in *Fathom's* resource book, *Data in Depth*, motivate and engage your students.

Fathom is easy to use. Within minutes, students will be focussed on data, mathematics, and statistics. From algebra to AP statistics through college-level course, *Fathom* enriches learning across the mathematics curriculum, and is a valuable tool for teaching history, social studies, science, and other areas of data analysis.

The prices below are quoted in dollars, as they are dependent locally on the rand-dollar exchange rate.

Single-User Fathom = \$119.95

10-User Fathom = \$399.95

50-User Site/Network Fathom = \$899.95

Unlimited Site/Network Fathom = \$1299.95

Student Edition Fathom = \$39.95

(Only for Site License holders)
